

Wall Mounting with Impaling Clips (IMP-4)

INSTALLATION INSTRUCTIONS:

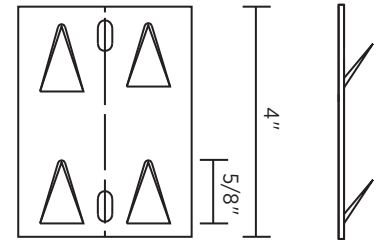

This installation technique uses angled Impaling Clips (IMP-4) to mount our acoustical wall panels.

1. Determine the number of IMP-4 Impaling Clips to be used per panel (see guide on the left). Horizontal panels greater than 4' wide and less than 8 SF use 3 clips.
2. Lay out panel location on the wall.
3. Fasten IMP-4 Impaling Clips to the wall 48" O.C. with the points facing up. **Note:** If panel dimension is less than 48", space clips evenly.
4. Attach panels by pressing down toward the wall so points imbed firmly in the back of the panel.
5. This installation technique will leave a 5/8" reveal between the ceiling and the top of the panel.

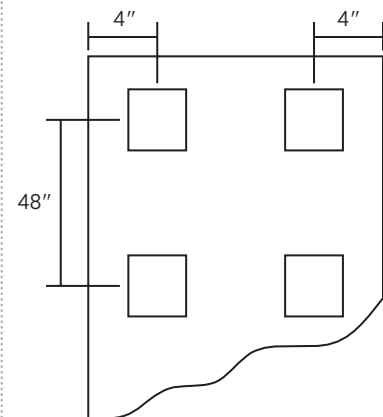

Panel Size	# of IMP-4 Clips
less than 8 sf	2
greater than 8 sf	4
greater than 16 sf	6
greater than 32 sf	8

Note: Due to variations in fiberglass thickness and wall inconsistencies, some shimming may be required to align the panel edges.
