

T-Grid Mounting Bracket

Our **T-Grid Mounting Brackets (TGMB)** allow for cloud style installation of our acoustical panels. Panels ordered with this mounting method ship with brackets pre-installed into resin hardened locations on the back of each panel and one #8 3/4" Tek screw per bracket. Panels are ready to slide onto a 15/16" T-Grid (supplied by others).

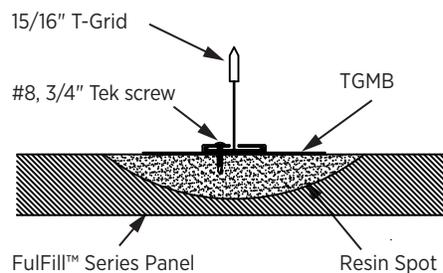

INSTALLATION INSTRUCTIONS:

1. Be sure you have the correct orientation of the T-Grid brackets on the back of the panels.
2. Using a single piece of T-Grid, slide the T-Grid through all of the brackets in that row of panels
3. Install one (1) #8, 3/4" Tek screw through each T-Grid bracket into the T-Grid to prevent panel from sliding out of place.
4. Secure the T-Grid to the ceiling or ceiling structure via wire, cable, or appropriate fastener, supplied by others. Use at least four (4) hanging points per T-Grid.

Bracket Placement:

Standard Panel sizes:

Locations indicated below are for standard placement. If you require custom locations for the brackets, please let us know.

Note: If the panel is over 4' in both length and width, a third row of T-Grid brackets will be added to each panel.
